Tropical Weather Outlook
NWS National Hurricane Center Miami FL
800 AM EDT Tue Aug 14 2018

For the North Atlantic...Caribbean Sea and the Gulf of Mexico:

1. A non-tropical complex area of low pressure located several hundred miles south of Cape Race, Newfoundland, is producing cloudiness and thunderstorms mainly to the east of the center. Although latest satellite images indicate that the low has not improved in organization, conditions could become a little more conducive for subtropical rather than tropical development by Wednesday. The system is forecast to move northeastward over the colder waters of the North Atlantic by late Thursday or Friday, which should limit any additional development.

* Formation chance through 48 hours...medium...40 percent.

* Formation chance through 5 days...medium...40 percent.

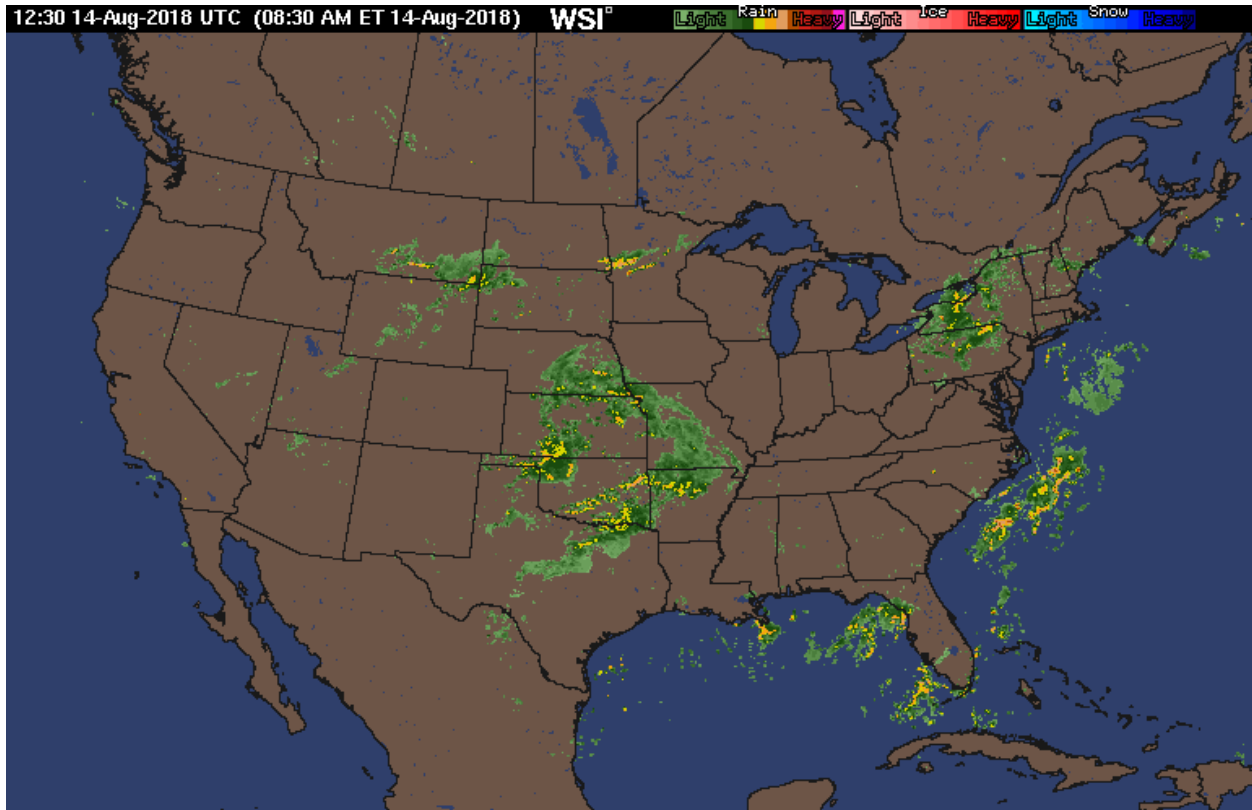

Forecaster Avila
